

The Project Review Portal

A simple guide — for everyone, no experience needed

If someone at American Food & Beverage sent you a link and asked you to “review a workflow” or “leave feedback,” this page is for you. It explains everything in plain language: what this is, why it exists, where to find it, and when to use it. No technical background required.

WHAT IS IT?

The Review Portal is a webpage that shows you how a part of the AFB app works — what the screen looks like, what information it collects, and what happens after someone fills it out. Underneath each one is a simple comment box.

You read, you comment. That's the whole idea. You're not editing anything, you're not logging into the real app, and you can't break anything by clicking around.

WHY ARE WE DOING THIS?

Because the people who actually do the work — receiving, packing, shipping, answering the phone — notice problems that get missed when the app is built. A field that's confusing, a step that's missing, a button in the wrong place. This is the easiest way to catch that **before** it costs real time on the floor.

It also means suggestions don't get lost in a hallway conversation or a text message nobody can find again. Every comment is saved, dated, and tracked until someone actually resolves it.

WHERE DO I GO?

You'll be sent a link that looks like this:

```
https://afb-backend-58ys.onrender.com/review/<a long code>
```

Click it, or paste it into any browser — phone, tablet, or computer all work. **You do not need a username or password.** The long code in the link is your access, so keep the link private and don't forward it anywhere public — it's the same as leaving a door unlocked.

WHEN SHOULD I USE IT?

Any time you're sent a review link — there's no set schedule. A few guidelines:

- Try to look it over within a few days of getting the link, while the screen is fresh in your head.
- You can comment more than once, and come back to the same link later — nothing expires or locks after one visit.
- If you spot something mid-shift and don't have time to write it up, jot a quick note and come back to it — better a rough comment than none.

How to Leave a Comment — Step by Step

- 1 **Open the link.** You'll see a page with a list of screens down the left side (things like “Receiving,” “Log a Return,” “Reports”).
- 2 **Click a screen name** to open it. You'll see four boxes: what the screen looks like, how the process flows step by step, what information it collects, and what else it affects downstream.
- 3 **Read through the four boxes.** You don't need to understand every technical detail — just react to whether it matches how the work actually happens.
- 4 **Scroll down to the comment box.** Type your name and email if you want a follow-up (both optional), pick a category, and write your comment in plain language — a sentence or two is plenty.
- 5 **Click Submit comment.** That's it — it's saved immediately and the person running the review gets notified.

What Category Do I Pick?

Category	Use it when...
Bug	Something looks broken, wrong, or doesn't match how the real process works.
Suggestion	You have an idea that would make the screen or process better — not broken, just improvable.
Question	You're not sure why something works the way it does, or need more explanation.
Approval	This screen looks right to you as-is — no changes needed, just a thumbs-up on record.

Not sure which one fits? Pick your best guess — nothing is locked in, and the person triaging comments can always recategorize it.

Common Questions

Do I need to create an account?

No. The link itself is your access — no username, no password, no sign-up.

Will people see my name?

Only if you type it in. The name and email fields are optional. If you leave them blank, your comment shows up as “Anonymous.”

Can I comment on more than one screen?

Yes — click through as many of the listed screens as you want and leave a comment on each, or just the ones you have something to say about.

What happens after I submit a comment?

It's saved right away and the person running the review gets an email. They'll mark it Accepted, Deferred, Rejected, or Resolved once they've looked at it — you don't need to do anything else.

I made a mistake in my comment — can I edit it?

Not directly, but you can just submit a new comment clarifying or correcting it. All comments stay visible, so context isn't lost.

Does this affect the real app or real data?

No. This page only shows a description of how a screen works — it's not connected to real orders, real inventory, or real customer data. You can't accidentally change anything by using it.

Quick Reference

What	A webpage showing how an app screen works, with a comment box under it.
Why	So the people doing the real work can catch problems and suggest fixes early.
Where	The link you were sent — no login needed. Keep it private.
When	Any time — review within a few days if you can, come back anytime after.
How	Open link → pick a screen → read the four boxes → write a comment → submit.
